

SHOWGROUND MAPS – Mayne Maps, Mapping Services

Some property owners are buying software and are producing their own property maps.

However, a map from Mayne Maps avoids the need to buy software and spending considerable time and expense in learning to use this software.

To map a Showground Map, Alan uses many sources of data, usually at no cost.

He extracts the relevant information from topographic maps as well as satellite images.

This is updated with any maps already existing.

To complete the project, GPS data is often used. This data can be collected by the property owner or collected by Alan on-site.

If the property owner collects his own GPS data it can be emailed to Alan to reduce the cost of the map.

Alan from Mayne Maps supplies the map in the form of an image that has been produced using the software Corel Draw.

Corel is very powerful in its graphics capabilities and is not linked to a farm management system or database.

This means that map production is both very economical in time and powerful in its detail and image quality.

The completed map can be exported into a multitude of file types depending on the needs of the client.

For promotion of Shows, for locating of the venue and for organizing the event, maps are vital.

The Caboolture High School map also shows the kind of detail that could be of use in organizing a show and allocating spaces to the numerous stall holders at the show.

These maps can be used:

- ? On the internet to promote the show
- ? On notice boards at the show or in the office to aid in communication
- ? As printouts to the numerous people who work at or who visit the show grounds, and
- ? As a record of the hidden detail in the form of water pipes, electricity lines, power outlets etc.

Contact Mayne Maps and tell Alan about your property and your requirements. He will provide an expected price or a quote and also send you samples of maps similar to your property that he has produced in the past.
